SUMMARY

System developer and architect at Soya Group, building full-stack .NET and React systems, integrations, and APIs for a group spanning shipping, real estate, and energy, with a later mandate to implement AI across the whole group. Before that, over six months at DNB Bank I designed and built six production-grade AI tools for credit workflows: structured extraction from facility agreements, automated rulebook review, and Office document generation with programmatic quality gates. My discipline is verification: systems that return "N/A" instead of guessing, cite every claim, and fail their own build when output does not hold.

EXPERIENCE

Soya Group *System Developer & Architect* *Nov 2026 – Present*

- Full-stack development in .NET (C#) and React: new and existing systems, web solutions, integrations, and REST APIs, plus adapting the group's standard systems to the needs of the business.
- Shape the design of the group's IT solutions, development environments, and ways of working, in close collaboration with business areas across shipping, real estate, and sustainable energy.
- Will drive the implementation of AI across the whole group in a later phase.

Consulting IT *AI & Automation Engineer, on assignment at DNB* *Mar 2026 – Nov 2026*

- Designed and built AI agents and automated workflows with Microsoft Copilot, Copilot Studio, Claude, and Power Automate, reducing repetitive manual work across departments.
- Structured extraction from facility and leveraged buyout agreements: 85 and 81 defined data points from 100+ page documents, replacing 2 to 4 hours of manual transcription per deal. Undisclosed terms return "N/A", never a guess.
- Automated compliance review of credit memos against four internal regulatory documents: an eight-section report with source citation, a self-check pass, and an anchoring guardrail.
- Built a PowerPoint generation pipeline with a custom text-metrics engine that measures content against per-textbox budgets and fails the build on any overlap.
- Owned requirements and architecture for a trade finance automation: reverse-engineered an undocumented pricing model and found the average funding rate is duration-weighted (a 13-point error naive logic would reproduce silently).

SEB *Thesis: Agentic AI Engineering* *2025 – 2026*

- Ran a qualitative case study on integrating agentic AI into software development at SEB: six semi-structured interviews with developers, architects, and managers, analyzed thematically.
- Found that current agents perform closer to junior developers than autonomous experts, shifting effort from execution to context engineering and verification, with a sharper scalability gap in undocumented legacy systems than in greenfield ones.
- Proposed governance controls for regulated deployment: structured execution environments, sandboxed access for undocumented legacy systems, and treating architecture and business rules as version-controlled artifacts agents can consume directly.

Örebro University *Business Intelligence Developer (Internship)* *2025*

- Replaced Excel-based budget and resource planning with a Power BI prototype (DAX, Medallion architecture) and a decay-curve model that improved forecast accuracy, delivered agile with IT architects and senior stakeholders.

Earlier roles *2019 – 2025*

- Elon (Sales Associate, 2024 to 2025); ICANIWILL (Customer Service Representative, 2021 to 2024, and Accounting Assistant, 2020 to 2021, bookkeeping and AP/AR in Fortnox and Specter); Friskis & Svettis (Receptionist, 2019 to 2020). Continuous employment throughout full-time studies.

EDUCATION

Örebro University *BSc in Information Systems* *2023 – 2026*

Nuremberg Institute of Technology *International Business Exchange* *2024 – 2025*

SKILLS

AI & Automation:	Microsoft Copilot · Copilot Studio · Power Automate · Claude API · LLM Orchestration · AI Agents
Development:	C# · ASP.NET · TypeScript · React · Python · Java · SQL Server · PowerShell
Tooling:	Azure DevOps · Git
Data & BI:	Power BI · DAX · Medallion Architecture · Data Modeling
Also:	Dynamics 365 · SAP · Fortnox · SailPoint · UML · Scrum
